

Two cable trays share a support bracket

Overview

These brackets are securely fixed to the wall or ceiling using a supporting flange, providing a stable and reliable platform for the cable tray system. They come in various designs, including L-brackets, U-brackets, and cantilever arms. According to DIN EN 61537, a cable support system is used to support and house cables. The system allows the use of electrical resources in electrical installations and/ or in communication systems. Cable ladder systems and cable tray systems shall be manufactured in accordance with BS EN 61537, channel support. With the RS 60 cable tray installation system, we offer you the last installation type of the standard support construction, so that you can implement all installations required in the building project with circuit integrity maintenance on the basis of the standard support construction. UNITECH's metal framing channel is cold formed on modern rolling machines from low carbon. Hubbell's NEXTFRAME® Ladder Tray is the effective and widely used cable runway that supports and delivers bundles of cable between cabinets, racks, and closets, along walls, and suspended from ceilings. The Ladder Tray features light, rugged, tubular steel construction. They are used in conjunction with cable trays to securely support cables, facilitate directional changes in cable runs, and aid cable channelling around.
