

What is the size of the round hole for a fiber optic cold connector

Overview

SC connector is built around a long cylindrical 2.5mm diameter ferrule, made of ceramic (zirconia) or metal (stainless alloy). A 124~127um diameter high precision hole is drilled in the center of the ferrule, where stripped bare fiber is inserted through and usually bonded by epoxy. A fiber optic connector is a mechanical device used to align and join optical fibers, enabling light to pass through with minimal loss. The connectors can be put on patchcords, pigtails or components with single-mode (SM). The SC (Standard Connector, Subscriber Connector) is a fiber optic connector released by NTT in the mid-1980s. The ferrule is slightly larger than the diameter of the fiber core adding. Ferrules are typically mated to the connector housing, the connector body holds the fibers. Some types of optical connectors are listed with some specifications.
