

What temperature is required for fireproof cable trays

Overview

The DIN cable tray standard specified that the entire cable tray system must be tested in an oven which is at least 3 metres long for a period of 30, 60 and 90 minutes at temperatures of up to 1000 Degrees celsius. To obtain copies of the Fire Performance Test Report for Cablofil fire proof cable. ucts; however, as an alternative DIN 4102-12 can be used. Simulates real fire conditions at high temperatures. Controls flame size and burn duration for consistent testing. Without these, test results may not be reliable. The cable tray system in the oven heated up at temperatures of 1000°C for a period of 30, 60 or 90 minutes, the fire resistance grade woule be E30. Fire-resistant cable tray and conduit assemblies are designed to withstand extreme temperatures, preventing the spread of fire and ensuring the continued operation of critical equipment.
