

# When replacing the pluggable optical module in a PTN device

## Overview

Built-in optical modules cannot be replaced. □Exercise caution when. Quick Reference Guide to PTN 910/950/960 Site MaintenanceMaintenance ProcedureReplacing BoardsReplacing Pluggable Optical ModulesPTN 960PTN 950PTN 910Products□Before replacing an optical module, confirm the installation position, record the optical module type, and select spare parts with the same. A pluggable, or small form-factor pluggable (SFP) optical transceiver is a compact, removable module standardized to convert high-speed electrical signals into pulses of light before transmission, and conversely, upon receiving the pulses of light, it converts them back to electric signals. Well. Pluggable optical transceivers are compact, hot-swappable network interface modules that serve as the critical bridge between electronic and optical domains in modern networks. The following figure shows the QSFP-DD transceiver, but the procedures outlined in this document apply to all pluggable transceivers. The QSFP-DD. Small Form-factor Pluggable modules (SFP module) are the workhorses of modern network connectivity, enabling flexible fiber optic or copper links between switches, routers, firewalls, and servers.
